Museum's attendance.

A lot of people think that museums and galleries are becoming less and less popular. In our days it seems to be more interesting just ^{to} go for a walk instead of visiting museums, theatres and other culture places.

I collected some data on English museums and galleries to make this research. It can show us numbers of people who have visited museums in 2013, 2015 and 2017 years. What can we see? In one museum and two galleries the number of visitors has increased. It can show us that people didn't forget about museums.

For example, the number of the British Museum's visitors has increased more than in 2 times since 2013. The number of attendance of the National Gallery and the Tate Gallery has increased too, but at the same time the number of people who have visited the Natural History Museum and the Science Museum became smaller in 2 times.

In my opinion these museums can do something with it. At first they can add something more experimental and practical to make visitors feel more involved into a process. Museums can also appeal some scientists for meeting visitors and telling them more interesting information. And of course advert can help in this situation. Museums should let people know that they have new interesting things and events. I'm sure that these museums will get new visitors after these steps.

I hope that number of visits to museums will increase because attendance of museums gives us a lot of information about our big wonderful world. At least, it is still respectively to visit museums.
